It currently consists of 13 contigs. Gaps between the contigs are represented as runs of N. The order of the pleces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

```
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                  This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6558

* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "vorking draft' sequence. It currently

* consists of 66 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Gaps
NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New nucleic acid molecules encoding polypeptides with RNA-directed RNA polymerase enzymatic activity, useful in modulating gene expression in plants, humans and animals, as well as in plant cell/tissue cultures or
                                                                                                                                                                                                                                                                                                                                       The present sequence is a cDNA encoding tomato C-protein having RNA-directed RNA polymerase (RdRP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RdRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undesirable expression or overexpression of a gene.
                                                                                                      Sanger HL;

                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         control of the niveries are sequence.

The sequence represents a crown encount. The niveral creation comprises the nucleic acid and protein of the invention. The protein of the invention can catalyse in vitro transcription can be either primed by RNA or DNA carealyse in vitro transcription can be either primed by RNA or DNA coligonucleotides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RGRP CDNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of a pharmaceutical composition and for inhibiting expression of any desired gene by transferring the RRP system to organisms that either lack a comparable mechanism or do not sufficiently expression of any desired gene by transferring the rinhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for ensuring stable heterologous, gene expression in the control of gene expression as primers for amplification of nucleic acid molecules and as tools for the detection of expression of the CDNA molecules and as therapeutic agent for the mulans and animals and virus infersion of indesired gene expression in humans and animals and for inhumance and virus infersion of indesired gene expression of the antibody is useful for invention is an inferior. The control of cancer and virus infersion of indesired gene expression of the antibody is useful for invention and animals and animals and animals and animals and animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunoprecipitation or immunolocalisation of the protein, identification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptides interacting with it and screening expression libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence represents a cDNA encoding the tomato RNA-directed RNA
                                                                                            Tomato; RGRP; RNA-directed RNA polymerase; in vitro transcription; cytostatic; virucide; RNA synthesis inhibitor; antibody; immunogen; transgenic plant; transgenic animal; cancer; viral infection; immunoprecipitation; immunolocalisation; ss; gene therapy.

This sequence represents a cDNA encoding the tomato RNA-directed RNA polymerase (RdRP/HF) of the invention. The invention comprises the nucleic acid and protein sequences of RdRP. The protein of the invention can catalyse in vitro transcription of short single stranded RNAs into can catalyse in vitro transcription of short single stranded RNAs into CDNA molecules, this transcription can be either primed by RNA or DNA oligonuclectides or be unprimed. The protein may have cytostation or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP cDNA sequence and a template nucleic acid molecule which causes a disease are useful for treating a disease acid molecule which causes a disease are useful for treating a disease acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of any desired gene by transferring the system to organisms that either lack a comparable mechanism or do not sufficiently express their own RdRP. An antibody or an antagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for menuing stable heterologus, gene expression in transgenic organisms. The sequence is useful for inhibiting to the control of gene expression, as primers for amplification of nucleic acid molecules and as thoraptericagened gene expression in humans and animals. The control of sequences are useful for infection in humans and animals and the antibody is useful for infection in humans and animals and the antibody is useful for infection or immunoprecipitation or immunological and the antibody is useful for infection in humans and animals and the antibody is useful for the indexer from the wild type RdRP sequence shown in the Pacellication but was created by the information shown in table 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                             New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          152

potato calmodulin
            Controlling growth and development of potato plants can be achieve by increasing or decreasing the expression of a gene encoding calmodulin. Transpente potato plants carrying sense nucleic acid constructs of p-PCM-1, a CDNA clone of potato calmodulin, exhibit increased shoot and tuber growth yet plants carrying antisense nucleic acid constructs exhibit decreased shoot and tuber growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is RACE (rapid amplification of 5'-cDNA ends) PCR gene specific reverse (GSP) primer, GSP400, used to amplify a cDNA encoding tomato C-protein having RNA-directed RNA polymerase (RARP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RARP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RARP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RARP is useful in gene therapy, particularly for treating a disease that is caused by the undesirable expression or overexpression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô

The present sequence is RACE (rapid amplification of 5'-cDNA ends) PCR gene specific reverse (GSP) primer, GSP1200, used to amplify a cDNA encoding tomato crprotein having RNA-directed RNA polymerase (RRRP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RARP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RARP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RARP is useful in plant cell or tissue cultures and in plant disease that is caused by the undesirable expression or overexpression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This sequence represents the tomato RNA-directed RNA polymerase (RdRP) specific PCR primer (SS4400 used to to obtain the 5' and of the CDNA molecule using the rapid amplification of CDNA ends (RACE) technique. The invention comprises the nucleic acid and protein sequences of RdRP, the invention comprises the nucleic acid and protein sequences of RdRP, short single stranded RNAs into DNA molecules, this transcription of either primed by RNA or DNA molecules, this transcription of short single stranded RNAs into DNA molecules, this transcription of either primed by RNA or DNA molecules, this transcription can be invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RGRP CDNA sequence and a template nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system to ne used in the preparation of a pharmaceutical composition and for inhibiting expression of any desired gene by transferring the RdRP system to organisms that either case, a comparable mechanism or do not sufficiently express their own RdRP. An antibody or an antagonist or inhibition to the protein are netting the part of inhibiting man directed RNA synthesis and for sensions of the preparation of the principle of the princ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              heterologous, gene expression in transgenic organisms. The sequence is useful for probes and/or for the control of gene expression, as primers for amplification of nucleic acid molecules and as tools for the detection of expression of the CDNA molecules. Additionally, nucleotide and protein sequences are useful for suppression of undesired gene expression in humans and animals. The RARP is useful as a therapeutic agent for the control of cancer and virus infection in humans and animals and the antibody is useful for immunopercupitation or immunoleculisation of the protein, identification of polypeptides interacting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                    New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals -

This sequence represents the tomato RNA-directed RNA polymerase (RdRP) specific PCR primer GSP1200 used to to obtain the 5' end of the cDNA obtain the 5' end of the cDNA specific PCR primer GSP1200 used to to obtain the 5' end of the cDNA obtain the 5' end of the cDNA modecules (RACE) technique. The invention comprises the nucleic acid and protein sequences of RdRP, the protein of the invention can catalyse in vitro transcription of Short single stranded RNAs into DNA molecules, this transcription of a cither primed by RNA or DNA oligonacledides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the cither primed by RNA or DNA oligonacledides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the cither primed by RNA or DNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of a pharmaccutical composition and for inhibiting expression of any desired gene by transferring the RNAP system to organisms that either lack a comparable mechanism or do not sufficiently express their own RRPP. An antibody or an antagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for ensuring stable of a ramplification of nucleic acid molecules and as tools for the control of cancer and virus infection in humans and animals. The RAPP is useful as a therapeutic agent for the control of cancer and virus infection in humans and animals. The RAPP is useful as a therapeutic amimals and the antibody is useful for immunolocalisation of the protein, identification of interacting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals

                                                                                                                                                                                                                                                                                                                              The present sequence is RACE (rapid amplification of 5'-cDNA ends) PCR ence specific reverse (GSP) primer, GSP470, used to amplify a CDNA encoding tomato C-protein having RNA-directed RNA polymerase (RdRP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RdRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is sepecially useful in plant call of tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undesirable expression or overexpression of

This sequence represents the tomato RNA-directed RNA polymerase (RdRP) specific PCR primer (SSA20 used to to obtain the 5' end of the cDNA colecule using the rapid amplification of CDNA ends (RACE) technique. The invention comprises the nucleic acid and protein sequences of RdRP, the invention can catalyse in vitro transcription of Short single stranded RNAs into DNA molecules, this transcription can be either primed by RNA or DNA oligonucleotides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP CDNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which chauses a disease are useful for treating administering a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of a pharmaceutical composition and for inhibiting expression of any desired gene by transferring the RdRP system to organisms that either lack. An antibody or an antagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for ensuring stable useful for inhibiting RNA directed RNA synthesis and for ensuring stable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cancer; colon; breast; ovary; oesophagus; kidney; thyroid;
stomach; lung; prostate; pancreas; carcinoma; antitumour; cancerous;
cytostatic; gene therapy; antineoplastic; Wilm's tumour; adenocarcinoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    heterologous, gene expression in transgenic organisms. The sequence is useful for probes and/or for the control of gene expression, as primers for amplification of nucleic acid molecules and as tools for the detection of expression of the cDNA molecules, Additionally, nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and protein sequences are useful for suppression of undesired gene expression in humans and animals. The RdRP is useful as a therapeutic agent for the control of cancer and virus infection in humans and animals and the antibody is useful for immunoprecipitation or immunolocalisation of the protein, identification of polypeptides interacting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to CDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host calls comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigen
                                                                                                                                                                                                             cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; ovarian antigen; ovary; ovarian; breast; cancer; tumour; ovarian cancer; breast cancer; tumour; reproductive system disorder; lifertility; pregnancy disorder; anovulation; polycystic ovary syndrome; PCOS; ovarian cyst; dysmenorrhoea; endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; infection; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive; gene; ss.
activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcinoma, infiltrating ductal cancer infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABLG1664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set

treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmeorinoea), endocrine disorders, infertions (e.g., chlamwdia, HIV, toxoplasmosis, and toxic shock syndrome, ovarian cysts, and dysmeorinoea), inflammatory conditions (e.g., mastitis, oophoritis and againtis), immune disorders (e.g., congenital and acquired toxic shock syndrome, ophoritis, systemic lupus erythematosus), blood-related disorders (e.g., congenital and acquired immunodeficiencies, neurological disorders, gastrointestinal disorders and uninary system disorders. Ovarian antigen polypeptides and polymuleorides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymuleorides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the contine may be used as food additives or to prepare antibodies contined to the present contined to the energy contined and phenotyping. The present contined to the present contined and phenotyping of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAZ52858-Z53014 represent expressed sequence tag (EST) fragments derived from a human pancreatic tumor cDNA library and which encode the proteins represented AAY73814-Y74252.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ü
The invention relates to non-typeable Haemophilus influenzae BASB205 polypeptides and polynucleotides. Sequences of the invention are used to treat non-typeable H. influenzae infections. They are also used as components of vaccines useful for treating infections preferably bacterial infections such as otitis media, pneumonia, sinusitis, nosocomial infections, invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infections of the upper respiratory tract and inflammation of the middle ear. The present sequence is non-typeable H. influenzae strain 3224A BASB205 DNA upstream region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relate to the isolation of genes AAC59215-C59261 encoding 47 human secreted proteins AAB27794-B27840. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc portion for increasing the stability of the fusion protein as compared to the human protein only. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and outber cancers of the adrenal gland, bone, bone marrow, breast, and other cancers of the adrenal gland, bone, bone marrow, breast, and other cancers of the adrenal gland, bone, bone condities, (c) candiovascular discons, allergies, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collitis; (c) cardiovascular discorders such as myocardial ischaemias; (d) epilepsy; and (f) infections diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human regulatory molecule; HRM-1; cytostatic activity; immune modulator; transcription factor; enhancer; cell proliferation stimulation; cancer; treatment; microarray; detection; diagnosis; cell.proliferation disease; leukemia; lymphoma; myeloma; adenocarcinoma; sarcoma; bladder; bone; brain; lung; liver; ovary; skin; teratocarcinoma; immune response; allergy; asthma; diabetes; multiple sclerosis; Grave's disease; myasthenia gravis; ss.

The present invention describes a complex (1) comprising a TIP49 family member and STAP1 (Skpl(a cyclin A-interacting protein)-associated ratio. Also described are: (1) a transcription regulatory complex comprising TIP48 and/or TIP49 and three or more proteins or polypeptides; (2) identifying an agent active against cancer cells that polypeptides; (2) identifying an agent active against cancer cells that with a test compound and measuring TIP49 ensymatic or ligand binding activity; and (3) an anti-cancer agent, preferably an anti-proliferative agent, particularly a nucleic acid or antibody identified by the method of (2). (1) has cytostatic activity, and can be used in transcription regulation. (1) can be used for screening new agents for the treatment arms.
                                                                                                                               Complex containing a TIP48 or a TIP49 family member and various other proteins is useful to screen for new agents to treat cancers that do not express \rm cMyc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human immune/haematopoietic antigen genomic sequence SEQ ID NO:27160.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel human regulatory molecules (HRM) which have cytostatic activity and act as immune modulators, transcription factors or enhancers. The HRMS can be used to stimulate cell proliferation. Antagonists and agonists of the proteins of the invention can be used to treat cancer. The encoding nucleic acids can be used in microarrays to detect polynucleotides (and their expression levels) that encode HRMs in a biological sample. The HRMs and microarrays can be used diagnose, treat or prevent cell proliferation diseases especially cancer, e.g. leukemia, lymphoma, myeloma, adenocarcinoma, sarcoma, cancer of e.g. bladder, bone, brain, lung, liver, ovarry, skin, etc, teratocarcinoma, or to treat or prevent immune responses e.g. allergies, asthma, diabetes, multiple sclerosis, Grave's disease or myasthenia gravis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, STAP1; Skp2; cyclin A-interacting protein; TIP48; TIP49;

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 27160; 3071pp + Sequence Listing; English.

AMK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or delactions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is forward PCR primer, P127Bam1, used to amplify a cDNA encoding tomato C-protein having RNA-directed RNA polymerase (RdRP) activity. This primer contains BamHI site to enhance the clouing efficiency. This protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. This may lead to various physiological about and/or morphological changes. Transgenic plants containing RdRP nucleic acid is useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undesirable expression or overexpression of
the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases. especially cancers and cancer metastases of haematopoietic actived cells. AAK64703 to AAK87649 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK854942 to AAK874950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tomato; gene therapy; RNA-directed RNA polymerase; RdRP; gene expression;

This sequence represents the tomato RNA-directed RNA polymerase (RdRP) specific PCR primer P127Baml used to clone the full length RdRP CDNA molecule of the invention. The invention comprises the nucleic acid and protein sequences of RdRP, the protein of the invention can catalyse in vitro transcription of short single stranded RNAs into DNA molecules, this transcription of short single stranded RNAs into DNA molecules, this transcription of about single stranded RNAs into DNA molecules, The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP CDNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule which causes preparation of a pharmaceutical composition and for inhibiting expression of any desired gene by transferring the RdRP system to corganisms that either lack a comparable mechanism or do not sufficiently express their own RdRP. An antibody or an attagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for protein are properties.

                                                           ABN67264/
                                                                          This invention describes a nucleic acid (I) with differential expression between tumour and normal cells and which has cytostatic activity. (I) work as modulators of Ras activity by inducing expression of tumour suppressor genes. (I), and polypeptides encoded by them, are useful as targets for diagnosis or therapy and in screening to determine the particularly for diagnosis and treatment of tumors, especially by modulating expression of (I) by gene therapy, antisanse RNA or ribozyme modulating expression of (I) by gene therapy, antisanse RNA or ribozyme polypeptides (by administration of the polypeptide or its activator, antication of many class II tumour suppressor genes (i.e. genes that are not primary targets for tumour-initiating mutations).

Chilaly 2. Aghlasize for tumour-initiating mutations).

Challely 2. Aghlasize for tumour-initiating mutations.
                                                                                     ö
immunoprecipitation or immunolocalisation of the protein, identification of polypeptides interacting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids differentially expressed between tumor and normal cells, useful for diagnosis or therapy of tumors and for screening active

```
The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus galactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5843 sequences (51), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6604-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                           Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; gene; antiinflammatory; infection; vaccine; meningitis; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fraser C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to growth in call offerentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mycobacterium tuberculosis; immunostimulatory peptide; T cell epitope; stimulate; interferon-gamma; IFN-gamma; production; vaccine; tuberculin skin test; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from clotal human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from olige-dr primed coDNA libraries. Such ESTs are not well suited form olige-dr primed coDNA clother from the 5' ends of mRNAs and even in those cases where longer convex sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Single exon nucleic acid probes for analyzing gene expression in human brains -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer; ss.
                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver
                                                                                                                                                                                                                            claim 1; SEQ ID NO 7457; 639pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 between vaccinated and infected subjects) and as immunoassay reagents for detecting specific antibodies. An advantage of these peptides is that they stimulate production of IFN-gamma (critical for a protective immuno response to M. tuberculosis) by CD4-positive T cells. The protein encoded by this sequence has amino acid similarity to a dipeptide transport protein.
                                                                                                                                                                                                                                                                                                                                                   AAT49100-175 are DNA sequences isolated from Mycobacterium tuberculosis, which encode partial sequences of immunostimulatory peptides. Each of the clones encode at least one immunostimulatory T cell epitope. The clones were identified by testing over 300 fusion clones (alkaline phosphatase-M. tuberculosis peptide fusions) for their ability to stimulate interferon (IRN)-gamma production. By clones were initially designated to have some ability to stimulate IRN-gamma production, of which 76 are shown in AAT49100-175. These sequences can be used to obtain the full length M. tuberculosis genes and corresponding proteins using standard techniques. The peptides are useful in vaccines, as reagents in an improved tuberculin skin test (especially using peptides different from those used in vaccines so as to allow differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                         Probe #7587 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human genome-derived single exon probe from lung SEQ ID No 7914.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 0.5%; Score 19; DB 22; Length 461; Best Local Similarity 100.0%; Pred. The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12887 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising can a collection of detectably labeled nucleic acids derived from human lung many in a baseled nucleic acids from eukaryote lung mRNA, to a single exon probe, a labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, the above mentioned microarray; assigning exons in several that above mentioned microarray assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method in the above mentioned microarray; assigning exons in several classus and/or cell types using hybridisation to a single exon probe, comprising (a) identifying exons from genomic sequence by the method classus and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of the exons should be assigned to a single gene; a petide composition of the exons in the tissues and/or cell types using hybridisation to a single exon expression analysis, and for identifying exons in a gene; particularly cush as asthma, lung cancer, chronic obstructive pulmonary disease (COPP), interstitial lung disease (ILD), familial idopathic pulmonary alveolar proteinosis, karagenes suddences, guilmonary dysplasia, primary cilaray equence is a single exon pulmonary and hy
Human; ds; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tubercous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histlocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary histlocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary histlocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary displasia; pulmonary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      measure gene expression in human lung samples -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID No 7914; 634pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represent nuclectide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63122 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                          Human breast cancer associated antigen nucleotide sequence SEQ ID NO:180.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for N-myc and TrkA genes.
                                                   Human; neuroblastoma; malignancy; cancer; tumour marker; N-myc; TrkA; ss.
                                                                                                                                                                                                                                                          Nucleic acids originating in gene expressed in human neuroblastoma, useful as probe or primer in diagnosing prognosis of human neuroblastoma, malignancy and susceptibility indicator or tumour marker for anti-cancer agents

The present sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number and the clone it was derived from are given in the descriptor line.

The invention relates to 31 novel genes and their fragments (nucleic acid sequences: AAA61260-A61293; amino acid sequences AAB12301-B12371) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 31 polynucleotides, based on which tissues they are most highly expressed in and include products for the diagnosis or treatment of cancer; tumours, AIDS, autofumune disorders, allergy, cardiovascular disorders, viral, bacterial and fungal infection. The genes are used to generate fusion for increasing stability of the fused protein as compared to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated signal transduction. They can be used for controlling fertility and behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility in livestock and controlling reproduction in rodents or insects by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated pheromone receptor polypeptides - used to develop products for controlling fertility and behaviour in vertebrates and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                           The invention relates to polynucleotide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility and polypeptides are particularly useful in e.g. controlling fertility in interrupting the normal behaviours of rodents or insects by interrupting the normal behaviours of rodents or insects that result in mouse pheromone receptor VRIO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
interrupting the normal behaviours of rodents or insects that result reproduction. The present sequence represents the coding sequence of mouse pheromone receptor VR11.
                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                Drosophila melanogaster expressed polynucleotide SEQ ID NO 20840.

The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated signal transduction. They can be used for controlling fertility and behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility in investock and controlling reproduction in rodents or insects by interrupting the normal behaviours of rodents or insects by interruption; the present sequence represents a cDNA encoding a mouse pheromone receptor VRIO. The CDNA is deposited under the Genbank
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated pheromone receptor polypeptides - used to develop products for controlling fertility and behaviour in vertebrates and

The present sequence encodes a heat stable DNA polymerase from the present sequence encodes a heat stable DNA polymerase from has an extremely high heat stability and can catalyse reactions at 70-90 degrees celsius. High molecular weight DNA was isolated from the bacteria, and screened with probes based on the polymerase genes of P. furiosus and Thermococus littoralis to isolate the present sequence. Host cells transformed with DNA encoding the present polymerase are used to produce recombinant DNA which is useful for nucleic acid amplification, including direct, reversed polymerase chain reaction (PCR) on double-stranded matrices and PCR on matrices having secondary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antidiaterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to polynucleotide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility and polypeptides are particularly useful in e.g. controlling fertility in interrupting the normal behaviours of rodents or insects by interrupting the normal behaviours of rodents a chaest tresult in reproduction. The present sequence represents a cDNA encoding a mouse pheromone receptor WHI. The cDNA is deposited under the Genbank
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated pheromone receptor polypeptides - used to develop products for controlling fertility and behaviour in vertebrates and

                                                                                                                                                                                                                                                                                                                                                                  ô
                                                      The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, of strointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple, sclerosis, theumatoid arthritis and ulcerative colitis;
                                                                                                                                                                                                           (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                 parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encoded by an isolated nucleic acid comprising an NA Group 3 or 4 molecule -

The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hcAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group I molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCLC-11, encoding human KIAA0963 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
sequences have activities such as: cytostatic; hepatotropic; vulnerary;
attipsoriatic; antiparkinsonian; nootropic; neuroprotective;
costeopathic; anticonvulsant; antiarthritic; immunosuppressant;
immunostimulant; cardiant; thrombolytic; coaquiant; vasotropic;
antidiabetic; hypotensive; dermatological; immunosuppressive;
antidiabetic; hypotensive; dermatological; immunosuppressive
antidiabetic; hypotensive; dermatological; immunosuppressive;
antidiabetic; hypotensive; dermatological; immunodeficiency carbe therapy
the presence of or predisposition to, or preventing or treating
pathological conditions associated with an ORFX-associated disorder. The
nucleic acids can be used to express ORFX proteins in gene therapy
vectors. The proteins and nucleic acids may be used to treat cancers,
proliferative disorders, neurodegenerative disorders, osteoarthritis,
graft vs host disease, cardavoascular disease, diabetes mallitus,
hypertension, hypothyroidism, cholesterol ester storage, systemic lupus
erythematosus, severe combined immunodeficiency (SCID), AIDS, viral,
allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,
nocturnal haemoglobinuria, antiinflammatory disease; to enhance
coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides the primary nucleotide sequence of the WSBV genome (AAM6589), predicted transcript sequences (AAM6589), predicted transcript sequences (AAM65894-AAM65893) and encoded proteins (AAM64910-AAG65051) and oligonucleotide sequences (AAM65840-63160) suitable for use as primars or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral gene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create transgenic viral resistant shrimp.
                                            -H
                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primary nucleotide sequence of the shrimp white spot Bacilliform virus (WSBV), useful for producing viral polypeptides that can be used to screen for agents that are useful for treating WSBV infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Shrimp white spot Bacilliform virus; WSBV; diagnosis; viral infection; antiviral agent; gene expression; antisense construct; transgenic viral resistant shrimp; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Kodira C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ·.

The present sequence is reverse PCR primer, P127BGL, used to amplify a ctDNA encoding tomato C-protein having RNA-directed RNA polymerase (RdRP) activity. This primer contains BgIII site to enhance the clouing efficiency. This primer contains partial states of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA molecules. RdRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is sepecially useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undesirable expression or overexpression of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides the primary nucleotide sequence of the WSBV genome AAM6289), predicted transcript sequences (AAM6289), predicted transcript sequences (AAM6289), and encoded proteins (AAM62910-AAG85051) and oligonucleotide sequences (AAM62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral gene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create transgenic viral resistant shrimp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primary nucleotide sequence of the shrimp white spot Bacilliform virus (WSBV), useful for producing viral polypeptides that can be used to screen for agents that are useful for treating WSBV infection -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the tomato RNA-directed RNA polymerase (RdRP) specific PCR primer P127Bg1 used to clone the full length RdRP cDNA molecule of the invention. The invention comprises the nucleic acid and protein sequences of RdRP, the protein of the invention can catalyse in vitro transcription of short single stranded RNAs into DNA molecules, this transcription can be either primed by RNA or DNA oligonuclectides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP cDNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of any desired gene by transferring the RdRP system to expression of any desired gene by transferring the RdRP system to cryanisms that either lack a comparable mechanism or of nutbitor to the protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA synthesis and for the protein are useful for inhibiting RNA directed RNA directed RNA synthesis and for any and a second and a se
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ·;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ensuring stable heterologous, gene expression in transgenic organisms. The sequence is useful for probes and/or for the control of gene expression, as primers for amplification of nucleic acid molecules and as tools for the detection of expression of the cDNA molecules. Additionally, nucleotide and protein sequences are useful for suppression of undesired gene expression in humans and animals. The RdRP is useful as a therapeutic agent for the control of cancer and virus infection in humans and animals and the antibody is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunolocalisation of the protein, identification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of polypeptides interacting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó

This invention relates to a method for selecting the sequence of a primer. The method comprises obtaining an optimum sequence for differential display from an expression gene data base, and using the base sequences most frequently expressed as the primer candidates in the order of frequency. The optimum primer group characterised by the use of genetic algorithm from the primer candidates is selected. The method is used for selecting a primer sequence quickly. The present sequence represents a primer used in an illustration of the method of the

Selection of primer base for optimizing primer selection comprises obtaining an optimum sequence for differential display from an expression gene data base -

COMPUTER READABLE FORM:

MEDIUM TYPE: RIOPPY disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURREWY APPLICATION DATA:

APPLICATION NUMBER: US/08/811,583

FILING DATE: 05-MAR-1997

CLASSIFICATION: 536

ATTORNEY/AGENT INFORMATION:

NAME: Haley, James F.

REGISTRATION NUMBER: MFG-1

TELECOMMUNICATION INFORMATION:

TELEPHONE: 12-596-9000

INFORMATION FOR SEQ ID NO: 5:

SEQUENCE CHARACTERISTICS:

LENGTH: 25 base pairs

TYPE: NUCLEIC acid

STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KESULT 6
